Dear **Recruiter of Hyppies ,**

I am thrilled to apply for the **Junior Software Engineer** position at **Hyppies**. As a career switcher from **Architecture**, I am confident that my passion for Software Engineering and my ability to learn quickly make me an excellent fit for this role.

While I may not have direct experience in Software Engineering, I have taken several online courses and completed a Full Stack Software Engineering Program at **RevoU**, an Online Academy that prepares students across Indonesia for most in-demand tech jobs, where I gained hands-on experience in React JS, Next JS, React Native, JavaScript, HTML, CSS, Tailwind CSS, SASS, and Node.js. In addition, I have developed a set of valuable transferable skills such as project management, problem-solving, and communication skills that can be applied to the job. I am confident that I can bring a unique perspective to your application development and contribute to the success of **Hyppies**.

I am particularly drawn to **Hyppies** because of your company's value of balance between a human warm-hearted approach. I am passionate about working for a company that is making a positive impact in the world, and I believe that my skills and experience would be a great asset to your team.

Thank you for considering my application. I would love to discuss my qualifications further and how I can contribute to your team.

Sincerely,
Niko Setiawan Pakunegoro
